

Case Study

AI Streamlined Workflows

In 2018, global law firm McDermott Will & Emery announced it would use Reveal's NexLP technology to streamline the work of its eDiscovery Practice, McDermott Discovery. The firm leveraged Reveal's NexLP artificial intelligence platform to adapt to its data, expedite its document review process, reduce costs and lower compliance risks for its clients.

Customized Artificial Intelligence

Using a proprietary continuous active learning workflow, our platform applies the use of AI on millions of documents in less than a minute — faster than traditional Technology Assisted Review solutions.

Why McDermott Will & Emery Selected Reveal's NexLP AI

“The combination of conversation mapping, sentiment analysis, and the Continuous Active Learning engine is a powerful tool that allows our teams to identify the most important information in a data set while defensibly eliminating irrelevant documents... Reveal's NexLP technology] will allow us to more closely align our legal teams with the necessary technology to further simplify and accelerate the document review”

- Martha Louks

Director of Technology Services McDermott, Will, & Emery

How Reveal's NexLP AI will Benefit its eDiscovery Practice

“[Reveal's NexLP AI] will be a great tool to shift what has become a very bifurcated process, where lawyers have become too far removed from the data review process, often to the detriment of vital fact and case development.”

- Christopher Adams
